

We are **Epiphany RBC**, a **marketing consultancy agency**, inspired by how **people** think and act, **operating globally** with the aim to help **grow businesses**.

And we are looking for a **Backend (or Full stack) developer!**

Who are we looking for?

We are looking for a Backend (or Full stack) developer who will help us revolutionize market research and turn conventional surveys into true conversations.

Stack?

- Node.js
- PHP
- Ruby
- Docker
- AWS
- Data visualization / D3.js is a plus

What will you do?

- Building a new platform with accompanying workflow (you are free to choose your own stack).
- Working on server structure, architecture and security.
- Maintaining a toolbox with data analysis tools.
- Setting up a data visualization platform.

What to expect?

- Work with a fun and international team of frontend developers and research consultants.
- The office is located in the city center (Jordaan) of Amsterdam, in a nice 'grachtenpand' at the Prinsengracht.
- You are an important part of the whole, huge opportunity to make a difference.
- Great team spirit (weekly drinks at a local café, boating through the Amsterdam canals, having lunch together and a nice trip every once in a while).

Let's meet!

Please let us know if you want to know more!
